New Safety Lines

LCAA Club rules have been updated to reflect the new “L” Shaped safety line.

- The Safety Line is an L-Shape that runs parallel to the main runway 25 feet from the fence on the north side of the pit area and perpendicular to the main runway 25 feet from the fence on the east side of the pit area
- All flying must be conducted beyond the Safety Line. Intentional flying behind the Safety Line is prohibited. 3.
- All aerobatic and high speed maneuvers must be conducted no closer than 75 feet from the Pit Area 4.
- Pilots should avoid flying behind themselves.

First Aid Kit Organization

The first aid kit is the orange box inside the shed to the left of the door

The supplies are ordered by section:

0. Cuts
1. Breathing
2. Bleeding
3. Shock
4. Head and Spine
5. Bone
6. Eyes
7. Burn
8. Bite and Sting
9. Extras

Safety Incidents

If a safety incident occurs, report it to the safety officer (Dave Eccleston).

Understanding incidents help us all learn from mistakes so we don't repeat them!

Include:

- What factors/behaviors led to the incident
- What first aid materials were used
- Use of the fire extinguisher

This helps us make sure we're fully stocked!

Flying Safety Tips

Some cardinal rules to follow at the field:

- Have a throttle cut on every plane!
- Test what happens if your transmitter loses power - aircraft can throttle up!
- Don't fly over people
- Keep aircraft below 400ft
- High speed passes should be farther than the runway midpoint

He should have set a throttle-cut!
